Career Objective

Eager Computer Science student with a strong foundation in Python, SQL, backend logic, and UI/UX design. Passionate about building reliable software features from scratch, maintaining scalable modules, and working alongside cross-functional engineering teams. Seeking to apply my hands-on project experience in machine learning and frontend interfaces to contribute effectively as a Trainee Software Engineer.

Education

B.Tech - Computer Science and Engineering (AI)

Pranveer Singh Institute of Technology, Kanpur

CGPA: 7.91

2023 - 2027

ISC (Class 12)

Bishop Westcott School, Kanpur

Percentage: 79.20%

2022

ICSE (Class 10)

Bishop Westcott School, Kanpur

Percentage: 79.12%

2020

Technical Skills

Programming: Python, SQL, Object-Oriented Programming (OOP), C

Data Science & ML: Scikit-learn, Pandas, NumPy, XGBoost, Random Forest, Feature Engineering

Tools & Visualization: Git, GitHub, VS Code, Jupyter Notebook, Matplotlib, Seaborn

Web & Design: UI/UX Design, Figma, HTML5, CSS3, Streamlit

Projects

AI-Driven Ganga Health Monitoring & Source Attribution System (Ganga-Guard)

Ongoing

Machine Learning, Data Engineering, Environmental AI

- Engineered a real-time river health monitoring system leveraging satellite/IoT datasets and training ML models (Random Forest, XGBoost) to cut physical sensor costs by ~70%.
- Developed graph-based reverse attribution logic to mathematically trace pollution sources and integrated Isolation Forest anomaly detection for data cleaning.
- Built modular backend data processing pipelines to handle incoming streaming data with high accuracy and reliability.

Marine Ship Fuel Consumption Prediction

20 Dec 2025 - 25 Feb 2026

Python, Pandas, Scikit-learn, Predictive Modeling

- Developed a modular Python application from scratch to predict vessel fuel usage based on environmental and telemetry data.
- Engineered end-to-end data pipelines including missing value handling, normalization, and feature scaling to optimize tree-based regression models (MAE: 2.35).
- Designed interactive performance visualization dashboards using Matplotlib and Streamlit to support real-time decision-making.

Experience

Graphic Designer & Technical Coordinator

March 2025 - November 2025

Raman Research and Innovation Private Limited

- Coordinated technical engineering teams across mobile app and web development projects to ensure seamless integration.
- Created UI assets, branding materials, and marketing collateral to enhance feature usability across software modules.
- Facilitated cross-functional technical communication between design and software developers to maintain execution timelines.

Certifications

Analytics: Deloitte Data Analytics Job Simulation

Hackathons: GDG Solution Challenge - Google x Hack2Skill

UX Design: UX Designer Certificate - Coursera

Web Development: HTML5 and CSS3 - Infosys Springboard

Nesternship: Nestle E-learning 2026
